

ALTA MODA

AM-20 Equalizer

The Alta Moda Audio AM-20 is a high-performance, high fidelity four-band parametric equalizer module, designed for the API™ 500-series compatible rack systems. State-of-the-art amplifier technology coupled with simple and elegant signal paths assure a smooth and robust sonic presence.

The four continuously variable and overlapping frequency bands give the AM-20 exceptional versatility for a wide range of audio applications. The parametric center frequencies with continuously variable bandwidth adjustment offer the critical sonic and creative control needed for a wide variety of music styles and applications.

Features

- Four-band parametric equalization
- Continuously variable frequency and gain controls
- Continuously variable Q controls
- Shelf/peak-dip selectable low frequency band
- Low noise, low distortion amplifier technology
- Hard-wire relay bypass
- APITM 500-series rack compatible module

Controls

High frequency – Shelving type, continuously 4kHz to 20kHz

High-mid frequency – parametric, continuously 1kHz to 7.5kHz

Low-Mid frequency – parametric, continuously 65Hz to 2kHz

Low frequency – shelf or peak/dip, continuously 20Hz to 120Hz
